

3 SJFLO AC/DC Solar Pump

A multistage centrifugal submersible pump designed for borehole and well water supply, featuring hybrid capability to operate on both DC solar and AC power. It includes durable stainless steel or plastic impellers, depending on the model. Some pumps offer manual changeover between AC and DC, while others automatically switch based on power availability. Key features include MPPT technology for optimized DC efficiency, wide voltage flexibility, soft start for motor longevity, and protections against dry running, overload, and voltage fluctuations. With robust construction and intelligent controls, these pumps are ideal for hybrid water supply solutions, balancing efficiency and reliability.

Typical Applications

- Agricultural irrigation: Solar pumps provide consistent water supply for crop irrigation, reducing reliance on traditional electricity or fuel.
- Livestock watering: Ideal for remote pastures, they supply water for livestock, ensuring healthy and sustainable animal farming.
- Community water supply: Solar pumps support rural areas by providing clean water for drinking, cooking, and sanitation needs.
- Aquaculture: They circulate and oxygenate water in fish ponds or shrimp farms, enhancing aquatic health and productivity.
- Garden or park irrigation: Useful for maintaining greenery in urban parks, gardens, or landscapes where electricity access is limited.

Technical Data

Model	Max. Flow (m³/h)	Max. Head (m)	Input Voltage (V)	Power (W)	Cable (m)	Outlet (inch)	Solar Panel Open circuit voltage (Voc)	Solar Panel Power	Configuration	Calculated (A)
3SJFLO 3-35	3	35	DC60V-400V/AC 80V-240V	300	2	1.25	<55V	≥1.3* PUMP POWER	VOLT=48 ,CURRENT= 6.2A	VOLT=48 ,CURRENT= 6.2A
